How To Make $20,198.16 In No Time Flat!

"Traders, individual investors and financial advisers are increasingly using the low-cost ETFs, which are essentially mutual funds that trade like stocks, to buy entire market sectors rather than researching and purchasing individual stocks."

-USA TODAY | June 2013

I know you could use an extra $20,198.16. Right?

You might have a new baby on the way, or you're changing careers, or looking for a way to help pay you college bound child's sky high tuition, room, and board.

After all, there's nothing like a life changing event to give you kick in the back side toward thinking about your family's financial security.

Maybe you're dying to buy a vacation home. Or take that once in lifetime vacation. Or finally buy that hot rod you've been eyeing for the last 20 years.

And wouldn't it be great if your rainy day fund was a little fatter? Just in case...

Or are you one of the near-retirement American households with a paltry $12,000 in retirement savings?

Whatever your reason is – **Dividends on ETFs are a great way to go.**

In just a minute, I'll show you how you can use our ETF dividend growth strategy to create $20,198.16 for you and your family.

And here's the best part...

You can do it in a safe and secure way. You don't need to risk it all on some biotech or a risky tech startup company.

Nope, you'll find the right ETFs are superior to just about any other investment when it comes to safely and securely collecting dividends from the fastest dividend growth stocks around.

Let's start with what makes Exchange Traded Funds or ETFs such a great way to invest.

Three Reasons ETFs Are Better Than Stocks And Mutual Funds

As you may know, owning a share of an ETF represents ownership of a basket of assets, usually stocks. So, with one purchase, you own a piece of all the stocks in the ETF.

The basket of companies owned by an ETF is determined by the index it's following. The ETF seek to mirror the returns of the index. In fact, some of the most widely know and traded ETFs mirror the major indexes.

For example, the SPDR S&P 500 (SPY) represents ownership in the 500 stocks making up the S&P 500 Index. The Diamonds Trust (DIA) represents ownership in the 30 stocks making up the Dow Jones Industrial Average Index. And the PowerShares QQQ (QQQ) represents ownership in the 100 stocks making up the NASDAQ 100 Index.

That's our first reason - ETFs give you instant diversification.

Obviously, owning a basket of different dividend paying stocks protects you from an individual company cutting their dividend. It's unlikely that all of the companies in an ETF will cut their dividend so our ETF dividend strategy is more likely to deliver a steady stream of cash.

Our second reason is ETFs can be traded just like a stock.

They have their own ticker symbol and you can buy or sell them anytime the markets are open. Mutual fund shares on the other hand may only be purchased or redeemed after the close of the market.

And our third reason is ETFs are taxed at normal rates.

ETFs are tax efficient investment vehicles. You typically don't have capital gains taxes on an ETF until after you sell it.

What's more, using an ETF to invest in high yielding companies like master limited partnerships (MLPs) can make your life much simpler during tax time.

If you invest directly in an MLP you'll need to file a K-1 because you're technically a silent partner. But with some ETFs that invest in MLPs you'll simply pay taxes the same way as you do with any other ETF.

Now let's look our ETF dividend growth strategy in action…

The Power Of ETF Dividend yields

"Dividends are a good long-tem theme."

-Russ Koesterich | CIS at Blackrock

Here's how it works...

Invest in **Vanguard Dividend Appreciation ETF** (VIG). It tracks the performance of the NASDAQ US Dividend Achievers Select Index

Over the last three years VIG's dividend increased by 34.5%. That's an incredible average of 11.5% per year dividend growth!

But that's not all...

VIG also increased in value from $47.19 per share to $67.08 at the end of the second quarter of 2013. That's a gain of 42.1% over the last three years.

Needless to say, if that trend continues investors will generate some serious money...

$10,000 invested today will grow to $11,633.93 at the end of year one.

And by the end of year five you'll be at $18,353.65.

$100,000 invested today will grow to $116,282.80 at the end of year one.

And by the end of year five you'll be at $183,536.52.

To put it another way, if you buy 750 shares of VIG today you'll rake in $20,198.16 in fat dividends over the next ten years... all for doing nothing!

And you initial investment of $50,310 will turn into a whopping $183,803.16.

There's no doubt about it, an ETF dividend growth strategy is powerful tool. One that you can use to make your goals a reality.

Now let's jump into my top 3 ETF dividend payers...

ETF Dividend Payer #1:
Diversify Your Dividend Growth

Vanguard High Dividend Yield ETF (VYM) is one of our top picks for ETF dividend payers.

VYM is currently trading for $67.21. Over the last year VYM has paid out $1.84 per share in dividends. That's a solid dividend yield of 2.7%.

It tracks the FTSE High Dividend Yield Index. It measures the investment return of common stocks of companies characterized by high dividend yields.

VYM is comprised of a nice cross section of sectors. Consumer staples 16.9% weighting are the biggest. Energy, industrials, and financials are next with 12.8%, 12.5%, and 12.3% respectively.

In short, VYM is a great way to generate dividends without too much exposure to the utilities sector. And that bodes well for future dividend growth.

ETF Dividend Payer #2:
Covered Calls Generate Income

PowerShares S&P 500 BuyWrite Portolio (PBP) is another of our top picks for ETF dividend payers.

PBP is currently trading for $21.86. Over the last year PBP has paid out $1.48 per share in dividends. That's a solid dividend yield of 6.7%.

It's based on CBOE S&P 500 BuyWrite Index. Typically it will invest 80% of its assets in S&P 500 stocks and will write or sell call options against it. This is a covered call strategy using the S&P 500.

It consists of holding a portfolio indexed to the S&P 500 and selling options. Each option has an exercise price at or above the current price level of the S&P 500.

Dividends paid on the component stocks underlying the S&P 500 and the dollar value of option premiums received from written options are reinvested.

PBP is great way to generate dividends and income.

ETF Dividend Payer #3: Energy Infrastructure MLPs

Morgan Stanley Cushing MLP Hi Income ETN (MLPY) is our final top pick for ETF dividend payers.

MLPY is currently trading for $19.42. Over the last year MLPY has paid out $1.36 per share in dividends. That's a sky high dividend yield of 7.0%.

It tracks the performance of 30 publicly traded energy and shipping master limited partnership (MLP) securities with an emphasis on current yield. The securities are chosen for inclusion according to a three-tier proprietary weighting system developed by Cushing MLP Asset Management, LP.

MLPY makes a great income generator because MLPS make their money from the amount oil and natural gas they're pumping through their pipelines and being stored in their tanks. And most of the revenue is tied to long-term fee-based contracts.

This fee based business model has highly predictable cash flows. MLPs collect their toll for transporting and storing oil and gas whether commodity prices are sky high or dirt cheap.

Now, not all dividend ETFs are the same. Beware of these 3 accidental big dividend payers…

Accidental Big Dividend Payer #1: Solar Doesn't Pay

Guggenheim Solar (TAN) is an accidental ETF dividend payer.

TAN is currently trading for $43.54. Last year TAN paid out $0.45 per share in dividends. That's a yield of 1.03%.

Here's the thing…

Most solar stocks don't pay dividends or even make money for that matter!

TAN's yield doesn't come from dividends. Nope, it comes from lending out shares of highly sought after solar stocks to short-sellers!

These short-sellers hate solar stocks. And they're willing to pay big bucks for the right to borrow them so they profit when the stocks fall in value.

TAN's managers have turned lemons into lemonade. But this accidental ETF dividend payer is clearly one to avoid.

Accidental Big Dividend Payer #2: Miners Are Tanking

Global X Junior Miners ETF (JUNR) is another accidental ETF dividend payer.

JUNR has a recent price of $15.40 and paid an annual dividend in 2012. However no dividend was paid in 2013...

As the name suggests, JUNR invests in small-cap miners stocks. It covers coal, copper, gold, iron, nickel, silver and titanium.

There's really not a nice way to say it... JUNR has been taken out to wood shed over the last few years. A few years ago the stock was trading in the $50s!

Obviously, the mining industry isn't doing so hot. And there's a big risk that small-cap mining stocks will need to slash or cut their dividend payments altogether this year.

This accidental big dividend payer is one to avoid at all costs.

Accidental Big Dividend Payer #3: Don't Walk Like An Egyptian

Market Vectors Egypt Index ETF (EGPT) is our final accidental ETF dividend payer.

EGPT is currently trading for $72.72. Last year EGPT paid out $1.04 per share in dividends.

The Index it tracks provides exposure to publicly traded companies that are domiciled and primarily listed on an exchange in Egypt or that generate at least 50% of their revenues in Egypt.

There's no denying the dividend is nice... But the country is mired in political turmoil.

As a result, the index could be downgraded from emerging market to frontier market status. I don't know about you but a frontier market with political instability doesn't seem like a good place to generate dividend income.

This accidental dividend payer shouldn't be trusted.

A Final Word

If you've made it this far, you no doubt understand the massive wealth building opportunity available with our ETF dividend growth strategy.

With a single trade, you get the flexibility of a stock combined with the diversification of a mutual fund. There's no question, ETFs give you the best of both worlds. What's more, most ETFs provide plenty of liquidity at a relatively low cost.

No other investment vehicle on the market today provides the range of features and benefits offered by ETFs.

As a result, millions of investors around the world are using ETFs today to profit from market trends. There's just no other way to explain how the ETF market has aggregated over $1 trillion in assets in just 20 years' time.

Now it's your turn to grab a share of these ridiculous profits.

To get you started, I showed you how you can generate $20,198.16 in dividends. I've revealed my top three ETF dividend payers. And I've exposed three accidental dividend payers to avoid.

Now's the time for you to take action - makes your dreams a reality.

Sincerely,

Corey Williams
