How To Make $20,198.16 In No Time Flat!

"Traders, individual investors and financial advisers are increasingly using the low-cost ETFs, which are essentially mutual funds that trade like stocks, to buy entire market sectors rather than researching and purchasing individual stocks."

-USA TODAY | June 2013

I know you could use an extra $20,198.16. Right?

You might have a new baby on the way, or you're changing careers, or looking for a way to help pay your college bound child's sky high tuition, room, and board.

After all, there's nothing like a life changing event to give you kick in the back side toward thinking about your family's financial security.

Maybe you're dying to buy a vacation home. Or take that once in lifetime vacation. Or finally buy that hot rod you've been eyeing for the last 20 years.

And wouldn't it be great if your rainy day fund was a little fatter? Just in case…

Or are you one of the near-retirement American households with a paltry $12,000 in retirement savings?

Whatever your reason is – **Dividends on ETFs are a great way to go.**

In just a minute, I'll show you how you can use our ETF dividend growth strategy to create $20,198.16 OR MORE for you and your family.

And here's the best part…

You can do it in a safe and secure way. You don't need to risk it all on some biotech or a risky tech startup company.

Nope, you'll find the right ETFs are superior to just about any other investment when it comes to safely and securely collecting dividends from the fastest dividend growth stocks around.

Let's start with what makes Exchange Traded Funds or ETFs such a great way to invest.

Three Reasons ETFs Are Better Than Stocks And Mutual Funds

As you may know, owning a share of an ETF represents ownership of a basket of assets, usually stocks. So, with one purchase, you own a piece of all the stocks in the ETF.

The basket of companies owned by an ETF is determined by the index it's following. The ETF seek to mirror the returns of the index. In fact, some of the most widely know and traded ETFs mirror the major indexes.

For example, the SPDR S&P 500 (SPY) represents ownership in the 500 stocks making up the S&P 500 Index. The Diamonds Trust (DIA) represents ownership in the 30 stocks making up the Dow Jones Industrial Average Index. And the PowerShares QQQ (QQQ) represents ownership in the 100 stocks making up the NASDAQ 100 Index.

That's our first reason - ETFs give you instant diversification.

Obviously, owning a basket of different dividend paying stocks protects you from an individual company cutting their dividend. It's unlikely that all of the companies in an ETF will cut their dividend so our ETF dividend strategy is more likely to deliver a steady stream of cash.

Our second reason is ETFs can be traded just like a stock.

They have their own ticker symbol and you can buy or sell them anytime the markets are open. Mutual fund shares on the other hand may only be purchased or redeemed after the close of the market.

And our third reason is ETFs are taxed at normal rates.

ETFs are tax efficient investment vehicles. You typically don't have capital gains taxes on an ETF until after you sell it.

What's more, using an ETF to invest in high yielding companies like master limited partnerships (MLPs) can make your life much simpler during tax time.

If you invest directly in an MLP you'll need to file a K-1 because you're technically a silent partner.   But with some ETFs that invest in MLPs you'll simply pay taxes the same way as you do with any other ETF.

Now let's look our ETF dividend growth strategy in action…

The Power Of ETF Dividend yields

"Dividends are a good long-term theme."

-Russ Koesterich | CIS at Blackrock

This strategy is based on two ways of making money… first it focuses on the growth rate of a stock, and Second it adds in the Dividend payouts and dividend growth!

Here's how it works…

The growth rate of a stock is very simple… you buy the stock for $10 and the next year it's at $11… you have a 10% growth rate. Where this really gets exciting is when you start to compound that growth.

So back to our example, your $10 stock has grown to $11 after one year… not bad… but let's say it grows another 10% in year 2…well… that $11 stock becomes $12.10… and in year three it grows another 10% becoming $13.31.

Notice how the first year you made only $1, but in year two you made $1.10 and in year three you made $1.21… not only does your original investment gain in value, but the gain you show should grow as well!

But that's just part one.

Part two is where it really gets exciting.

This is where you start adding in dividends… and dividend growth. Just like our example with compounding values, it applies to the growth rate of your dividends too.

Think about it… if you buy the right stock, you get not only a growing stock price, but a nice dividend. And that dividend grows too!

So what investment are we talking about here?

Take a look at **Vanguard High Dividend Yield ETF (VYM)**.

It tracks the performance of the FTSE High Dividend Yield Index, which consists of common stocks of companies that pay dividends that generally are higher than average.

Put bluntly, they look for stocks with big FAT dividends and invest.

Over the last 5 years VYM's performance has been astounding.

In 2010 you could scoop up the ETF for a paltry $34.67 a share. 5 years later you can grab that same ETF for a whopping $67.52.

In price appreciation alone, that's a $32 dollar gain.

But the number we really care about is the CAGR - the Compound Average Growth Rate. That number is a staggering 13.26%…

In other words the stock has grown by 13.2% every year since 2010.

But that's not all… the dividend has been on a rocket-ship too.

In the last 12 months, VYM paid out $2.18 in dividends… up from $1.09 in the same period a few years ago. So in 5 years the dividend has doubled in value…

But, once again let's look at the CAGR.

The Dividend Growth CAGR is up over 14%.

Does that mean it will always be up 14% every year? NOPE… for example, in one year dividend growth was up over 9% and in a different year it was up over 16%.

But let's just keep the average… 14%

That's an astounding growth rate, both for the stock and the dividend.

So, let's put it all together.

Let's say you go out and buy 100 shares of VYM right now.

The Stock price is $70.56.

So, you spend out of pocket $7,056.00

Now here's what you could get in return.

If the stock is able to continue climbing at a 13.2% growth rate for the next 10 years… the stock price will grow to $243.79… a profit of $173.23 a share

And then you have the dividends.

If the dividends continue to grow at 14% year after year, you'll get in year 10 a fat dividend of $8.08 - PER SHARE!

Over 10 years the total take in dividends will be a whopping $48.06 a share!

So let's add this all up…

You make $173.23 a share in appreciation PLUS another $48.06 in dividends giving you a profit of $221.29 PER SHARE…

So if you have 100 shares times $221.29 profit your total take is a whopping $22,129.09

To put it another way, if you buy 100 shares of VYM today you'll rake in $22,129.09 over the next ten years… all for doing nothing!

Just imagine having 200 shares or 2,000 shares!

With 2,000 shares, you'd have the potential to make $442,581.80 over 10 years!

Just think how 442 grand would change your life!

A Final Word

If you've made it this far, you no doubt understand the massive wealth building opportunity available with our ETF dividend growth strategy.

With a single trade, you get the flexibility of a stock combined with the diversification of a mutual fund. There's no question, ETFs give you the best of both worlds. What's more, most ETFs provide plenty of liquidity at a relatively low cost.

No other investment vehicle on the market today provides the range of features and benefits offered by ETFs.

As a result, millions of investors around the world are using ETFs today to profit from market trends. There's just no other way to explain how the ETF market has aggregated over $1 trillion in assets in just 20 years' time.

Now it's your turn to grab a share of these ridiculous profits.

To get you started, I showed you how you can generate more than $20,198.16 in dividends. I've revealed my top three ETF dividend payers. And I've exposed three accidental dividend payers to avoid.

Now's the time for you to take action - makes your dreams a reality.

Sincerely,

Corey Williams
